### Lorne Haveruk C.I.D., C.I.C., C.L.I.A.

During Lorne's 15 year career in the Irrigation Industry, he has served to create and direct irrigation industry training in Canada and the United States. As a Certified Irrigation Designer, Certified Irrigation Contractor, Certified Landscape Irrigation Auditor and a Certified Water Conservation Practitioner with California and Nevada, Mr. Haveruk is among the highest certified in North America.

Recently elected to the IA Board of Directors, Lorne is only the second Canadian ever to become a board member of the Irrigation Association which is the heart of the American Irrigation Industry association. He currently serves the Irrigation Industry in Ontario by chairing the Landscape Ontario Irrigation Commodity Group.

Prior experience from the Ski Industry where Lorne holds a degree in Ski Area Management, he was responsible for the creation and implementation of the staff training programs, risk management, and emergency procedures. Here he was exposed to electrical, mechanical, hydraulic and pressurized water systems of a large scale. His upper management position overseeing 6 supervisors and 250 staff with a million dollar labor budget has given Lorne a unique ability to teach others in a very simplistic, detailed, savvy manner.

In 1989, Lorne launched a design-build landscape/lighting contract business. During the past 15 years the company has installed over 1100 systems ranging from sports fields, golf courses, commercial and residential properties, nurseries, rooftops, as well as indoor systems.

WMS was founded as an Irrigation Consulting business focusing on the efficient use of water. WMS educates and trains those who design, install, service and operate systems, while assessing, auditing and analyzing consumption levels of existing irrigation systems, making every drop count. Rain water collection, cistern storage systems and reclaimed water are ongoing areas for expansion of the limited water supply.

WMS has completed more than 150 water assessment/audits during the past 11 years. In November 2003, WMS was selected from an RFP issued throughout Canada and the United States to Consult and assist the City of Nanaimo, with facilitating the sourcing, selection, presentations, tender document creation, implementation, and operation of a city wide Central Irrigation Control System (CICS) covering 22 km with 42 park complexes. Irrigation, lighting, facility access, water supply control, drinking fountains, water parks, and others will be controlled by this system as it is implemented.

WMS has been awarded the City of Toronto's Irrigation Assessment/Audit Pilot Project. They were the only company in Canada qualified to preform the required mandate. With live ET [Evapo Transpiration] weather input, savings in water range from 25% to 72%.

Currently, Water Management Services Inc. is the only company in Canada that offers irrigation central computer control training for private companies focused solely on water efficiency, as only Lorne can provide due to his many years of formal and hands on training and experience. WMS is also the first Independent Consulting Firm specializing in the field of Central Control in Canada and the USA. Prior to their involvement, end users had to go it alone—trying to figure out what system and features would best suit their needs, often not receiving exactly what they thought they wanted but did not know as this is a difficult task for those that are professionals in the CICS field.
